The IDN Variant Issues Project undertakes work to identify issues associated with the beneficial and safe delegation of IDN (Internationalized Domain Names) variants of the Top Level Domains. Managing IDN variants is a complex and important subject and the success of the project is dependent on significant community expertise input and cooperation in doing the work.

ICANN is responsible for the global coordination of the Internet's system of unique identifiers like domain names (like .org, .museum and country codes like .uk) and the addresses used in a variety of Internet protocols that help computers reach each other over the Internet. Careful management of these resources is vital to the Internet's operation, so ICANN's global stakeholders meet regularly to develop policies that ensure the Internet's ongoing security and stability. ICANN is an internationally organized, public benefit non-profit company.

## About Yonita Inc.

Yonita Inc. provides integrated solution for automated detection of code defects early in a development lifecycle. Thanks to detection of bugs and issues during the coding phase, Yonita cuts development costs by up to 20 percent and reduces schedules by up to 15 percent. Yonita Inc., founded in 2010 and headquartered in Silicon Valley, Mountain View with R&D center in Warsaw, Poland, is one of the leading companies offering solutions for automated software engineering.
